Single-lever Faucets

Monodin-N

New design. Maximum comfort.

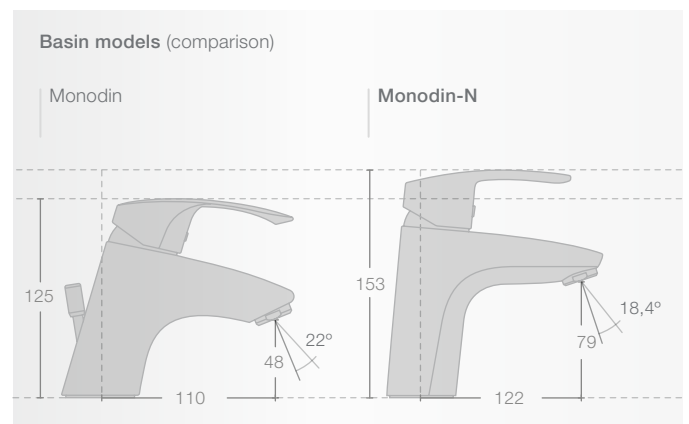

More sophisticated

With the aim of adapting to trendier bathroom spaces, a redesign of the **Monodin** faucet collection has been carried out, obtaining as a result a more sophisticated piece, with a taller body and a slimmer handle to ensure the maximum comfort.

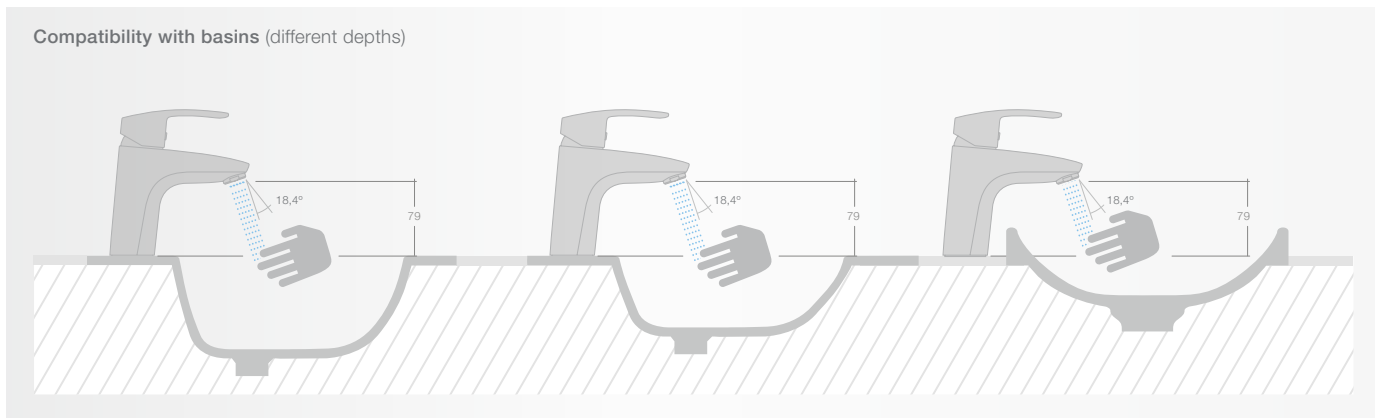

More ergonomic, more comfortable

The **Monodin-N** basin faucets feature a handle that rises towards the user facilitating its use in a comfortable and natural way. Moreover, thanks to its larger body, it is perfectly compatible with a wide range of Roca basins, regardless of their depth.

Compatibility with basins (different depths)

More elegant

The design of **Monodin-N** has been planned to provide a touch of elegance to the bathroom space. For this reason, the decor plates of the different built-in bath-shower and shower versions, with a diameter of 160 mm, offer a sober and minimalist design.

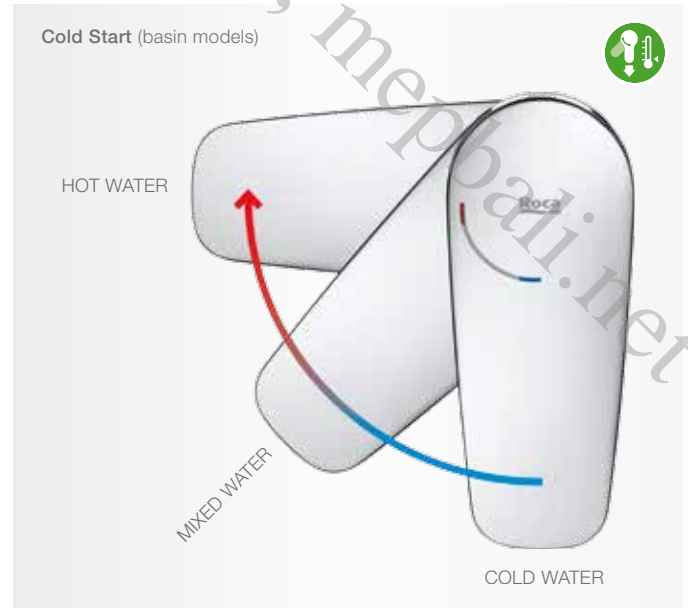

More sustainable

The **Monodin-N** basin models feature the **Cold Start** technology, so that the front opening of the faucets is exclusively reserved to cold water. Should you need to obtain hot water gradually, then you would need to turn the handle to the left. In this way, daily rituals such as hand washing may be carried out without turning on the boiler unnecessarily, and therefore without wasting energy.

Monodin-N also features flow limiters to **5l/min** that guarantee greater water savings, regardless of the pressure.

A sustainable benefit certified by the European Water Label, which aims to improve water consumption and the performance of bathroom products.

Ceramic cartridge, the heart of our faucets

The **ceramic cartridge** ① is the mechanical heart of the faucet, allowing the user to open, close and mix the flow and water temperature as desired.

Manufactured by Roca with the guarantee of the latest technology and the use of high quality and long lasting materials, the ceramic cartridge offers an unbeatable level of precision, comfort and softness in use, as well as a long life cycle.

The **metallic flexible** ② hoses that lead the water to the cartridge are also installed in the factory with a sliding nut mechanism that prevents the flexible hoses from twisting during installation and avoids the cutting off or leaking of the water supply.
